The following sample was submitted and identified on behalf of the client as:

TEST REPORT
COMMISSION REGULATION (EU) No 811/2013
of 18 February 2013
supplementing Directive 2010/30/EU of the European Parliament and of the Council with regard to the energy labelling of space heaters, combination heaters, packages of space heater, temperature control and solar device and packages of combination heater, temperature control and solar device

COMMISSION REGULATION (EU) No 813/2013
of 2 August 2013
implementing Directive 2009/125/EC of the European Parliament and of the Council with regard to ecodesign requirements for space heaters and combination heaters

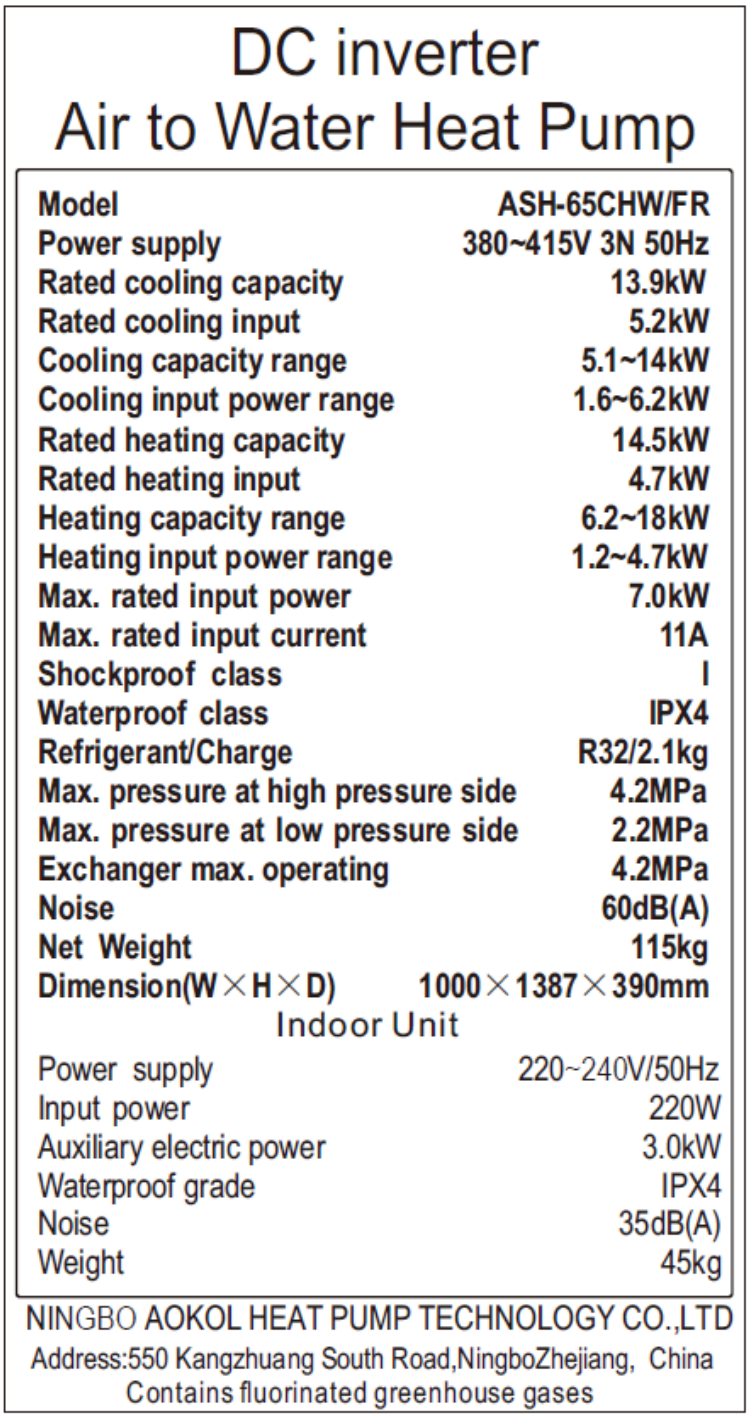
Report Reference No.....:	AHES210600161851
Tested by (name + signature)..... :	Jarvan Deng
Approved by (+ signature) ..... :	Hunter Lin
Date of issue..... :	2021-12-22
Total number of pages	26 pages
Testing Laboratory..... :	SGS-CSTC Standards Technical Services Co., Ltd. Anhui Branch
Address ..... :	1/F&2/F, West Building C12, Gongtou Liheng Industrial Square, Fanhua Road, Economic & Technological Development Area, Hefei, 230601 Anhui, China
Applicant's name ..... :	NINGBO AOKOL HEAT PUMP TECHNOLOGY CO., LTD.
Address ..... :	No.550 Kangzhuang South Road, Ningbo, Zhejiang, China
Test specification:	
Standard..... :	COMMISSION REGULATION (EU) No 811/2013; (EU) No 813/2013 EN 14825: 2018
Test procedure..... :	STR: EU Directive 2009/125/EC
Non-standard test method……..:	None
Test Report Form No. ..... :	811/2013_01/ 813/2013_1
Test Report Form(s) Originator..... :	SGS-CSTC
Master TRF..... :	2015-04-27

Test item description .....:	DC Inverter Air to Water Heat pump
Trade Mark ..... :	/
Manufacturer..... :	Same as applicant
Model/Type reference ..... :	ASH-65CHW/FR
Ratings ..... :	Refer to marking plates

Summary of testing:	
Tests performed (name of test and test clause): COMMISSION REGULATION (EU) No 811/2013 COMMISSION REGULATION (EU) No 813/2013. EN 14825: 2018	**Testing location:** Refer to p.1

Copy of marking plate

The marking plate is only the draft.



Test item particulars..... :	DC Inverter Air to Water Heat pump
Classification of installation and use ..... :	Fixed appliance
Supply Connection ..... :	Connected to fixed wiring
..... :	
Possible test case verdicts:	
- test case does not apply to the test object.....:	N/A
- test object does meet the requirement.....:	P (Pass)
- test object does not meet the requirement .....:	F (Fail)
Testing.....:	
Date of receipt of test item .....:	2021-07-01
Date (s) of performance of tests .....:	2021-07-01 to 2021-12-02

General remarks:

The test results presented in this report relate only to the object tested.
This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.
"(see Enclosure #)" refers to additional information appended to the report.
"(see appended table)" refers to a table appended to the report.

Throughout this report a comma is used as the decimal separator.

General product information:

The appliance is design for space heating used and with refrigerant R32.

COMMISSION REGULATION (EU) No 813/2013			
Cl.	Requirement-Test	Result-Remark	Verdict
	Ecodesign requirements		—
ANNEX I	Definitions applicable for Annexes II to V		P
ANNEX II	Ecodesign requirements		P
1. (a)	From 26 September 2015 the seasonal space heating energy efficiency and useful efficiencies of heaters shall not fall below the following values:		P
	Fuel boiler space heaters with rated heat output ≤ 70 kW and fuel boiler combination heaters with rated heat output ≤ 70 kW, with the exception of type B1 boilers with rated heat output ≤ 10 kW and type B1 combination boilers with rated heat output ≤ 30 kW:		—
	The seasonal space heating energy efficiency shall not fall below 86 %.		N/A
	Type B1 boilers with rated heat output ≤ 10 kW and type B1 combination boilers with rated heat output ≤ 30 kW:		—
	The seasonal space heating energy efficiency shall not fall below 75 %.		N/A
	Fuel boiler space heaters with rated heat output > 70 kW and ≤400 kW and fuel boiler combination heaters with rated heat output > 70 kW and ≤ 400 kW:		—
	The useful efficiency at 100 % of the rated heat output shall not fall below 86 %, and the useful efficiency at 30 % of the rated heat output shall not fall below 94 %.		N/A
	Electric boiler space heaters and electric boiler combination heaters:		—
	The seasonal space heating energy efficiency shall not fall below 30 %.		N/A
	Cogeneration space heaters:		—
	The seasonal space heating energy efficiency shall not fall below 86 %.		N/A
	Heat pump space heaters and heat pump combination heaters, with the exception of low-temperature heat pumps:		—
	The seasonal space heating energy efficiency shall not fall below 100 %.		P
	Low-temperature heat pumps:		—
	The seasonal space heating energy efficiency shall not fall below 115 %.		P
(b)	From 26 September 2017 the seasonal space heating energy efficiency of electric boiler space heaters, electric boiler combination heaters, cogeneration space heaters, heat pump space heaters and heat pump combination heaters shall not fall below the following values:		—
	Electric boiler space heaters and electric boiler combination heaters:		—
	The seasonal space heating energy efficiency shall not fall below 36 %.		N/A
	Cogeneration space heaters:		—

COMMISSION REGULATION (EU) No 813/2013			
Cl.	Requirement-Test	Result-Remark	Verdict
	for boiler space heaters, boiler combination heaters and cogeneration space heaters, the technical parameters set out in Table 1, measured and calculated in accordance with Annex III;		N/A
	for heat pump space heaters and heat pump combination heaters, the technical parameters set out in Table 2, measured and calculated in accordance with Annex III;		P
	any specific precautions that shall be taken when the heater is assembled, installed or maintained;		P
	for type B1 boilers and type B1 combination boilers, their characteristics and the following standard text: 'This natural draught boiler is intended to be connected only to a flue shared between multiple dwellings in existing buildings that evacuates the residues of combustion to the outside of the room containing the boiler. It draws the combustion air directly from the room and incorporates a draught diverter. Due to lower efficiency, any other use of this boiler shall be avoided and would result in higher energy consumption and higher operating costs;		N/A
	for heat generators designed for heaters, and heater housings to be equipped with such heat generators, their characteristics, the requirements for assembly, to ensure compliance with the ecodesign requirements for heaters and, where appropriate, the list of combinations recommended by the manufacturer;		N/A
	information relevant for disassembly, recycling and/or disposal at end-of-life;		P
(b)	the technical documentation for the purposes of conformity assessment pursuant to Article 4 shall contain the following elements:		P
	the elements specified in point (a);		P
	for heat pump space heaters and heat pump combination heaters where the information relating to a specific model comprising a combination of indoor and outdoor units has been obtained by calculation on the basis of design and/or extrapolation from other combinations, the details of such calculations and/or extrapolations, and of any tests undertaken to verify the accuracy of the calculations, including details of the mathematical model for calculating the performance of such combinations and details of the measurements taken to verify this model;		P
(c)	the following information shall be durably marked on the heater:		N/A

COMMISSION REGULATION (EU) No 813/2013			
Cl.	Requirement-Test	Result-Remark	Verdict
	if applicable, 'type B1 boiler' or 'type B1 combination boiler';		N/A
	for cogeneration space heaters, the electrical capacity.		N/A
ANNEX III	Measurements and calculations		—
1	For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published in the ***Official Journal of European Union***, or other reliable, accurate and reproducible method, which takes into account the generally recognised state of the art methods, and whose results are deemed to be of low uncertainty. They shall fulfil all of the following technical parameters.	EN 14825:2018, EN 14511-2:2018, EN 14511-3:2018, EN 12102-1:2017 were used.	P
2	General conditions for measurements and calculations		P
	(a) For the purposes of the measurements set out in points 2 to 5, the indoor ambient temperature shall be set at 20 °C ± 1 °C.		P
	(b) For the purposes of the calculations set out in points 3 to 5, consumption of electricity shall be multiplied by a conversion coefficient CC of 2,5.		P
	(c) Emissions of nitrogen oxides shall be measured as the sum of nitrogen monoxide and nitrogen dioxide, and expressed in nitrogen dioxide.		N/A
	(d) For heaters equipped with supplementary heaters, the measurement and calculation of rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, sound power level and emissions of nitrogen oxides shall take account of the supplementary heater.		N/A
	(e) Declared values for rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, sound power level and emissions of nitrogen oxides shall be rounded to the nearest integer.		P
	(f) Any heat generator designed for a heater, and any heater housing to be equipped with such a heat generator, shall be tested with an appropriate heater housing and heat generator, respectively.		N/A
3	Seasonal space heating energy efficiency of boiler space heaters, boiler combination heaters and cogeneration space heaters		N/A
	The seasonal space heating energy efficiency η_s shall be calculated as the seasonal space heating energy efficiency in active mode η_{son}, corrected by contributions accounting for temperature controls, auxiliary electricity consumption, standby heat loss, ignition burner power consumption (if applicable) and, for cogeneration space heaters, corrected by adding the electrical efficiency multiplied by a conversion coefficient CC of 2,5.		N/A

COMMISSION REGULATION (EU) No 813/2013			
Cl.	Requirement-Test	Result-Remark	Verdict
4	Seasonal space heating energy efficiency of heat pump space heaters and heat pump combination heaters		P
	(a)For establishing the rated coefficient of performance COP rated or rated primary energy ratio PER rated , the sound power level or emissions of nitrogen oxides, the operating conditions shall be the standard rating conditions set out in Table 3 and the same declared capacity for heating shall be used.		P
	(b)The active mode coefficient of performance SCOP on or active mode primary energy ratio SPER on shall be calculated on the basis of the part load for heating Ph(T j), the supplementary capacity for heating sup(T j) (if applicable) and the bin-specific coefficient of performance COPbin(T j) or bin-specific primary energy ratio PERbin(T j), weighted by the bin-hours for which the bin conditions apply, using the following conditions:		P
	— the reference design conditions set out in Table 4;		P
	— the European reference heating season under average climate conditions set out in Table 5;		P
	— if applicable, the effects of any degradation of energy efficiency caused by cycling depending on the type of control of the heating capacity.		P
	(c)The reference annual heat demand Q H shall be the design load for heating Pdesignh multiplied by the annual equivalent active mode hours H HE of 2 066.		P
	(d)The annual energy consumption Q HE shall be calculated as the sum of:		P
	— the ratio of the reference annual heating demand Q H and the active mode coefficient of performance SCOP on or active mode primary energy ratio SPER on and		P
	— the energy consumption for off, thermostat-off, standby, and crankcase heater mode during the heating season.		P
	(e)The seasonal coefficient of performance SCOP or seasonal primary energy ratio SPER shall be calculated as the ratio of the reference annual heat demand Q H and the annual energy consumption Q HE .		P
	(f)The seasonal space heating energy efficiency η s shall be calculated as the seasonal coefficient of performance SCOP divided by the conversion coefficient CC or the seasonal primary energy ratio SPER, corrected by contributions accounting for temperature controls and, for water-/brine-to-water heat pump space heaters and heat pump combination heaters, the electricity consumption of one or more ground water pumps.		P
5	Water heating energy efficiency of combination heaters		N/A

G	$(-15 - 16) / (T_{designh} - 16)$	n/a	n/a	82	−15	20(12)	[a] / 55	n/a	n/a	[a] / 49

[a] With the flow rate as determined at the standard rating conditions given in EN 14511-2 at 47/55 conditions for units with a fixed flow rate, and with a fixed delta T of 8 K for units with a variable flow rate. If for any of the test conditions the resulting flow rate is below the minimum flow rate then this minimum flow rate is used as a fixed flow rate with the outlet temperature for this test condition.

[b] Variable outlet shall be calculated by interpolation from $T_{designh}$ and the temperature which is closest to the TOL.

[c] Variable outlet shall be calculated by interpolation between the upper and lower temperatures which are closest to the bivalent temperature.

[d] If the variable outlet temperature is below the minimum of the operation range of the unit, this minimum should be considered.

Remark: With the flow rate as determined at the standard rating conditions given in EN 14511-2 at 47/55 conditions.

(a) From 26 September 2015 the seasonal space heating energy efficiency and useful efficiencies of heaters shall not fall below the following values:

Heat pump space heaters and heat pump combination heaters, with the exception of low-temperature heat pumps:

The seasonal space heating energy efficiency shall not fall below 100 %.

Low-temperature heat pumps:

The seasonal space heating energy efficiency shall not fall below 115 %.

(b) From 26 September 2017 the seasonal space heating energy efficiency of electric boiler space heaters, electric boiler combination heaters, cogeneration space heaters, heat pump space heaters and heat pump combination heaters shall not fall below the following values:

Heat pump space heaters and heat pump combination heaters, with the exception of low-temperature heat pumps:

The seasonal space heating energy efficiency shall not fall below 110 %.

Low-temperature heat pumps:

The seasonal space heating energy efficiency shall not fall below 125 %.

From 26 September 2015 the sound power level of heat pump space heaters and heat pump combination heaters shall not exceed the following values:

Rated heat output ≤ 6 kW		Rated heat output > 6 kW and ≤ 12 kW		Rated heat output > 12 kW and ≤ 30 kW		Rated heat output > 30 kW and ≤ 70 kW
